

BIM MANAGEMENT

WHAT IS BIM MANAGEMENT ?

Expertise focussed on the organisation of methods and processes to establish a 3D model. BIM management involves: formulating a contract and its follow-up, consolidating the model at interim reviews, converting project objectives in terms of BIM uses, and lastly, ensuring quality control while implementing practical examples.

BIM management applies to each stage of the project life cycle.

TYPES OF SERVICES

- BIM strategic plan implementation,
- BIM standards development, implementation and enforcement,
- BIM process implementation,
- BIM execution plan elaboration,
- Support in the production of engineering design drawings, calculations and specifications,
- 3D model audit and quality analysis,
- Cross-team support for BIM softwares,
- Optimising and resolving interoperability issues,
- Project template creation,
- Creating BIM object (REVIT families),
- Data management (3D model import / export data from database),
- BIM software training.

SECTORS

- Tertiary sector,
- Hospitals,
- Industrial sector,
- Airports,
- Infrastructure, etc.
